MERLIN Biotech CEO to present at BioFuture Nov. 8

The company's presentation package is available online.

Doylestown, Pa., Nov. 4, 2022 – MERLIN Biotech CEO Randall N. Hyer, MD, PhD, MPH, will present an overview of his new company's highly promising technology and its strategic plan on Nov. 8 at 12:10 p.m. EST at BioFuture, a leading industry conference online and in New York City Nov. 7-9.

This year, registered in-person attendees to BioFuture can view MERLIN's presentation live, and also access slides, which are posted [here](#). BioFuture registration is [here](#).

"We are delighted that MERLIN Biotech will be presenting at BioFuture," said Sara Demy, CEO of BioFuture's producer, Demy-Colton. "BioFuture brings together today's top innovators, investors and business leaders to discuss the forces shaping the future of therapeutics, and identify the potential of innovative, game-changing technologies that will drive the future of drug discovery. We are excited to have MERLIN participating in this important event."

At the recent Biotech Week Boston, one of the industry's largest events with over 4,000 participants spanning the drug development value chain, MERLIN Biotech CEO Randall N. Hyer, MD, PhD, MPH, won the Startup Springboard competition against 11 other highly selected startup companies.

MERLIN is a startup immunotherapy company leveraging the proven mRNA platform technology to develop novel therapeutics and vaccines against targets that address important unmet medical needs, including chronic hepatitis B infections, adult and pediatric cancers, and Lyme disease.

In response to the win, Dr. Hyer said "I am very humbled to have been selected as the winner, particularly because the pitches from my fellow competitors were so impressive. According to the criteria and the judges' feedback, Merlin's story won because we have highly innovative technology and a comprehensive strategy for clinical development that will ultimately treat people afflicted by serious, life-threatening diseases."

The rules of the competition, which were challenging, limited each company to only five minutes and five slides. View MERLIN's full deck, including the winning slides [here](#).

MERLIN Biotech is a spinout from the Baruch S. Blumberg Institute, a nonprofit organization, where Dr. Hyer also serves as president. Both are located on the Pennsylvania Biotechnology Center's Timothy M. Block Research Campus in Doylestown, Pa.

Combining innovative technology, robust intellectual property and an experienced leadership team, MERLIN Biotech is uniquely well-situated to make significant contributions toward advancing the discovery of new cures and vaccines. MERLIN Biotech's executive management and board members include a former top Moderna executive, a Nobel Prize winner and global experts in mRNA development, oncology immune-modulators, chronic hepatitis B and preventive vaccines for Lyme disease.

"We are very excited about the prospects for MERLIN Biotech because our mRNA technology takes advantage of the latest innovations in mRNA delivery and mRNA-directed protein production," Dr. Hyer said. "These approaches are distinct from prior approaches to treat chronic hepatitis B and cancer, and we are confident in our potential to create value from our industry-leading strategy, management and pipeline to developing novel therapeutics and preventive vaccines."

MERLIN Biotech's Scientific Advisory Board is composed of Harvey J. Alter, MD, 2020 Nobel Prize Laureate in Physiology or Medicine for his discovery of the hepatitis C virus; Stanley A. Plotkin, MD, world-renowned vaccinologist and former medical and scientific director of Sanofi Pasteur; and Margaret Chou, PhD, associate professor of pathology and laboratory medicine at the Children's Hospital of Philadelphia/University of Pennsylvania School of Medicine and co-inventor of the USP6 mRNA cancer immunotherapeutic technology being developed by MERLIN Biotech.

Forward Looking Statements

This press release contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, as amended, regarding Merlin Biotech's development of mRNA therapeutics and vaccines against adult and pediatric cancer, chronic diseases like hepatitis B, and infectious diseases such as Lyme disease. The forward-looking statements in this press release are neither promises nor guarantees, and you should not place undue reliance on these forward-looking statements because they involve known and unknown risks, uncertainties, and other factors, many of which are beyond Merlin's control and which could cause actual results to differ materially from those expressed or implied by these forward-looking statements. Except as required by law, Merlin disclaims any intention or responsibility for updating or revising any forward-looking statements contained in this press release in the event of new information, future developments or otherwise. These forward-looking statements are based on Merlin's current expectations and speak only as of the date hereof.

About BioFuture

BioFuture, produced by Demy-Colton, is a conference convening future-focused healthcare thinkers, top investors, stakeholders and cutting-edge companies to “Reimagine the Future of Therapeutics”. BioFuture will be held in-person in New York City on November 7-9, 2022, at the Lotte Palace Hotel, with a virtual access option for digital partnering and recorded content on November 14-16. BioFuture features multiple tracks of plenary sessions, presenting companies, workshops, networking, and an opportunity to schedule one-to-one meetings. BioFuture is produced by Demy-Colton, a leading life sciences and digital health events organization, with a long history of producing high-quality events that build networks between innovative life sciences companies and industry stakeholders.

About MERLIN Biotech

MERLIN Biotech is a platform start-up innovative biotechnology spinout from the Baruch S. Blumberg Institute. It leverages proven mRNA technology to develop novel therapeutics and vaccines against targets that address important unmet medical needs, including chronic hepatitis B infections, adult and pediatric cancers, and Lyme disease. MERLIN Biotech is located near major academic clinical research centers and supported scientifically by the Baruch S. Blumberg Institute and the Pennsylvania Biotechnology Center, a nationally recognized life-sciences incubator. Combined with solid technology, robust intellectual property and an experienced leadership team, MERLIN Biotech is uniquely well-situated for making significant contributions towards advancing the discovery of new cures and preventive vaccines. About the Baruch S. Blumberg Institute

An independent, nonprofit research organization, the Blumberg Institute was established in 2003 by the Hepatitis B Foundation to advance its research mission. Today, the Institute is one of the nation’s leading centers for translational research in hepatitis B and liver cancer. The Institute supports drug discovery, biomarker discovery and translational biotechnology around common research themes such as chronic hepatitis and liver disease in an environment conducive to interaction, collaboration and focus. The Institute is located in the Pennsylvania Biotechnology Center, which it manages, near Doylestown, Pa. Visit the institute’s [website](#) and follow us on [LinkedIn](#), [Facebook](#) and Twitter (@BlumbergInstit1).
